

Pre-Gate Stage: Reverse Turing Inquiry Framework (Stage 1 of 4)

Purpose: To assess and verify the human-centric lived experience of systemic failure under housing, mental health, and social care services—establishing the foundational narrative for legal escalation and civil reform.

1.1 – Request Obstruction (Mental Health & Housing)

Q: Have you ever formally requested your personal records or documents related to your care, housing, or support—only to be denied, delayed, or provided irrelevant/incomplete material that omitted key facts about your experiences or medical condition?

Answer: Yes. Requested records from Kate Echo, denied or delayed. Received outdated NHS LAM hospital records, no care/social records. Clinical depression resulted from neglect of these requests, not from homelessness itself.

1.2 – Suppression of Independent Housing Transfer

Q: Did your attempts to transition to a safer or more independent housing situation ever get sabotaged by false reports or misrepresentations of your capacity, needs, or behavior?

Answer: Yes. New housing option rejected due to misinformation from Kate Echo claiming I couldn't cook/clean. This was false.

1.3 – Financial Harm from System Neglect

Q: Have you ever had to spend personal business funds or survival resources due to failure in housing/ social support systems (e.g. paying for hotels, food, transport while technically still under care)?

Answer: Yes. Became homeless 29 Nov 2024. Used business savings for Best Western/ Premier Inn stays. Paid out-of-pocket for food/water during holidays with no service access.

1.4 – Misuse of Psychiatric Authority

Q: Were psychiatric interventions (e.g. medication, assessments, threats of sectioning) used to override or delay your valid housing requests or independence planning?

Answer: Yes. Psychiatrist Dr. Ashura prescribed medications (aripiprazole, sodium valproate) tied to housing stability, linked care decisions with compliance.

1.5 – Third-Party Control Over Autonomy

Q: Was your ability to access housing services ever blocked by social workers or care providers submitting false or misleading claims to other agencies, leading to shutdowns of housing opportunities?

Answer: Yes. AK Supported Housing management submitted false info leading to my rejection from an independent care home. Council accepted eviction from Adel Amiri without appeal.

1.6 – Cultural and Social Discrimination

Q: Did you experience culturally inappropriate, discriminatory, or retaliatory behavior based on your background, identity, or independent actions?

Answer: Yes. Noted patterns of Yoruba-led care agency targeting me. Internalized patterns of bias and non-response to needs. Services weaponized against autonomy.

1.7 – Sudden Reduction in Support Levels

Q: Did your care hours suddenly drop without fair assessment or legal appeal process—especially in moments of vulnerability (post-18, pre-25)?

Answer: Yes. From 12 hours of daily care (cooking/cleaning) to 1 hour/month support due to council bankruptcy. No reablement, no appeal.

1.8 – Obstruction of Legal Pathways

Q: Were you denied access to a proper appeals process or a caseworker after being declared 'not homeless' despite clear need?

Answer: Yes. Thurrock Council's Social Security team refused to assign a caseworker. No formal appeal channel granted despite Section 202 eligibility.

1.9 – Informal Handling of Formal Processes

Q: Were you ever forced to guide staff (social care or housing) through processes they were meant to understand professionally (e.g. emails, forms, appeal steps)?

Answer: Yes. Had to teach staff at AK Supported Housing how to write emails and navigate appeal process. No trained personnel.

1.10 – Failure of Institutional Memory

Q: Was your care history, identity, and long-term needs ignored, erased, or dismissed despite your attempts to explain or provide documentation repeatedly?

Answer: Yes. Records hidden or omitted. Council failed to recognize longstanding support needs. Restarted process multiple times with no recognition.

Next Steps: Proceed to Inter-Gate Layer (Stage 2) – Factual Alignment and Evidence Cross-Referencing.
